Xavier Lacey

Product-minded senior engineer with over eight years of experience designing, building, and scaling user-focused products. Proven expertise as a tech lead, effectively bridging teams and business stakeholders. Passionate about nature and leveraging technology to combat the climate crisis, I am now seeking my next opportunity to contribute meaningfully to sustainability-focused initiatives.

Material Index — *Senior Software Engineer, Contract*

JANUARY 2025 - PRESENT

Full-stack engineer at a circular economy company, focused on reducing construction waste. Node.js, TypeScript, Next.js, React, MongoDB, Prisma, tRPC, AWS, Postgres, SST, Vercel.

- ❖ Delivered a brand new marketplace platform for the reselling of construction materials from conception to launch as part of a small, cross-functional team.
- ❖ Maintained and enhanced a bespoke audit application, ensuring reliability and performance for existing users.
- ❖ Worked autonomously in a startup environment, balancing multiple product streams and adapting quickly to evolving business needs.

Sylvera — *Backend Software Engineer*

AUGUST 2022 - DECEMBER 2024

Backend engineer at a climate tech company, working across platform and product teams. Node.js, TypeScript, GraphQL, Postgres, AWS, Jest, Docker, Omni BI.

- ❖ Designed, developed, and managed RESTful and GraphQL APIs in TypeScript delivering user-focused solutions for both internal and external stakeholders.
- ❖ Tech lead for a new product that successfully delivered on-time, connected our clients with 200 developers and suppliers, and significantly enhanced client engagement.
- ❖ Initiated weekly communication between teams to align system architecture and technical solutions, and achieve project goals.
- ❖ Took initiative to build a business intelligence dashboard used by multiple teams to resolve internal bottlenecks and streamline product processes.
- ❖ Spearheaded and facilitated key discussions on engineering standards, including leading a workshop that promoted best practices in testing, database design and code structure; fostered a culture of technical excellence.
- ❖ Led many technical interviews; redesigned the coding challenge and encouraged a fairer interview process.

LoyaltyLion — *Full-Stack Software Engineer*

AUGUST 2017 - JULY 2022

Full-stack engineer at e-commerce startup. Joined as the seventh employee, contributing significantly to the company's growth through multiple product and team development phases. Node.js, TypeScript, Postgres, React, Redux, Ruby, Rails, Sidekiq, AWS, Docker, Terraform.

- ❖ Delivered features end-to-end across public RESTful Node.js/React and Ruby on Rails applications, enhancing platform capabilities and user experience.
- ❖ Proactively optimised team workflows and documentation, streamlining development processes and improving cross-functional collaboration.
- ❖ Automated documentation quality checks by integrating a doc linting tool into the build pipeline enhancing client-facing API documentation quality.

TECHNOLOGIES

Node.js, TypeScript, Next.js, Postgres, React, Docker, AWS, GraphQL, MongoDB, SST, Prisma, Tailwind, Firebase, tRPC, Jest, Terraform, Vercel, Netlify, GitHub Actions, Algolia

EDUCATION

University College London; *MEng Electronic Engineering with Nanotechnology — 2:1*

SEPTEMBER 2010 - JUNE 2014

AWARDS

The 'Own it' Sylvera Values Award in 2022 for extreme ownership

LANGUAGES

Fluent(ish) in French, have passable Portuguese and can read a third of Japanese
